

How to use VSXu with different audio API's

Default is to launch VSXu Player with only WASAPI support.

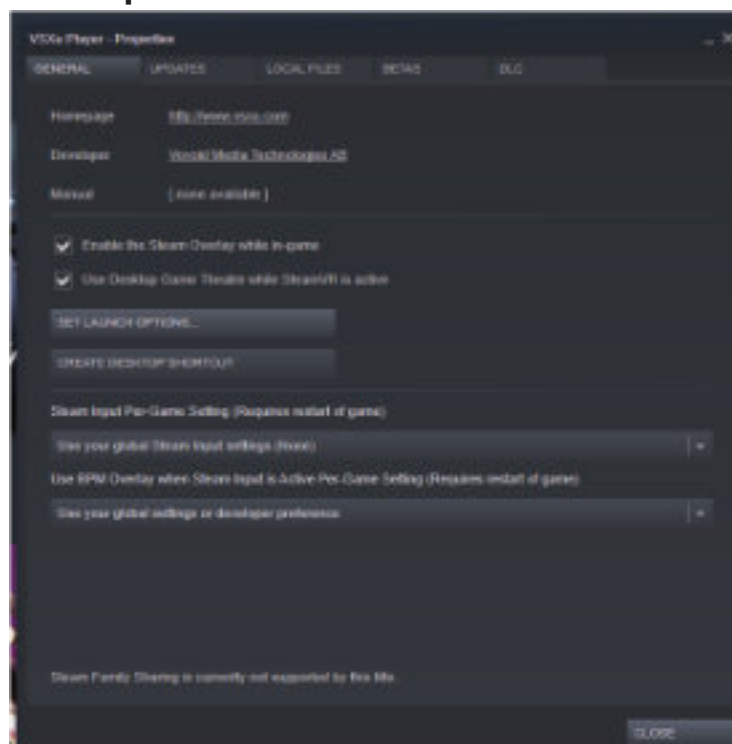

- ASIO -sound_type_asio
- DSOUND (DirectSound) -sound_type_ds

1. Right-click VSXu Player in Steam library

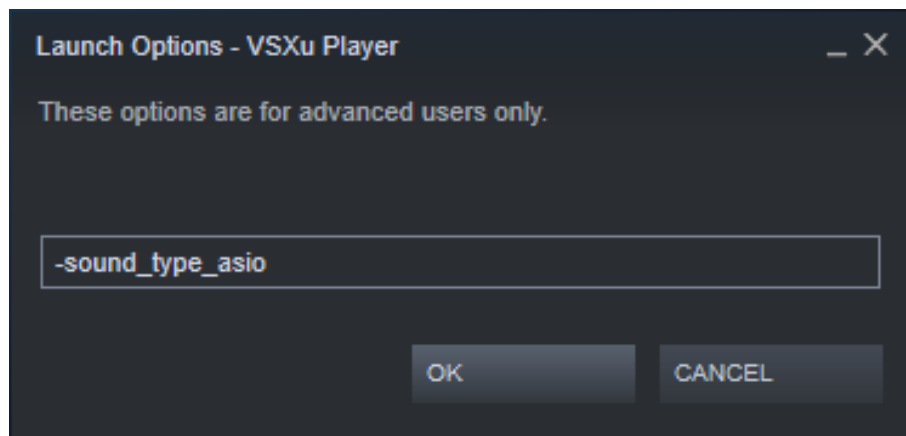

Click on “Properties...”

2. Click “Set Launch Options”

3. Enter the corresponding API type

Look in the list on the first page. Here we enter ASIO as an example.

4. Launch VSXu Player as usual

Note! You can do this via creating a Windows shortcut to VSXu Player also, and entering these parameters in the program arguments there.v
